

Features

Roll over table coating unit

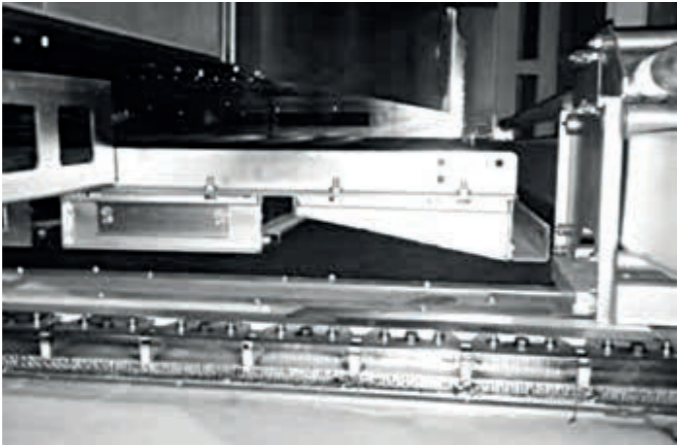

In this kind of coating, the mixture of latex and calcite is given to the front of the cylinder as foam. The cylinder over the table is motionless.

Coatings which can be performed in this system:

- Tufting carpet back coating
- Anti-skid surface
- Bath mats
- Lamination products
- Floor coverings (carpets and mats)

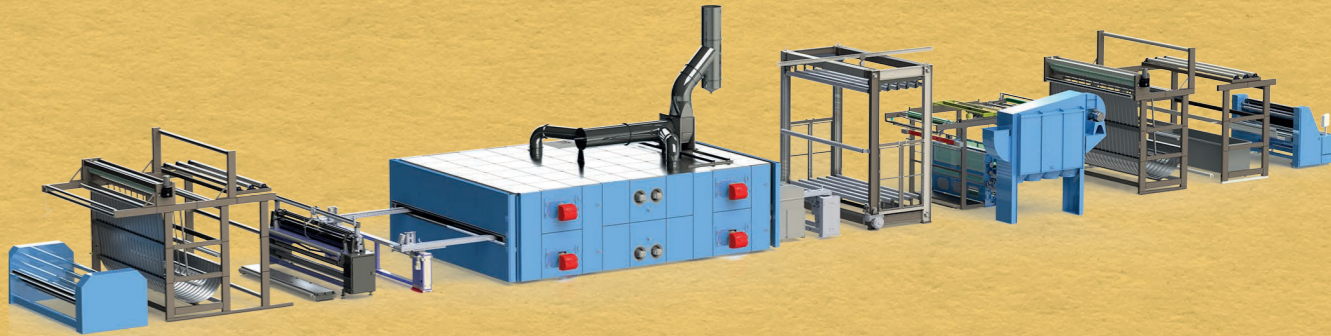

Advantages:

- Capacity increase in production
- Low cost
- High quality

ONE PROVIDER · THOUSANDS SOLUTIONS

ISOCARP finishing line offers the needed solution regarding all kinds of carpet finishing. It installs and operates complete finishing lines in the subjects of:

- Woven carpet
- Wall-to-wall carpet (tuft)
- Bath carpet, mat
- Synthetic turf carpet
- Carpet Tile

Features

Foam coating (gel floor) and bath carpet applications

Foam coating and drying lines are available for the carpet and bath mat products. It is possible to operate from the width of 2200 mm up to 5200 mm. It includes suitable solutions for anti-skid surface and embossing applications.

Lamination lines

Action back or felt lamination can be performed alone or together with foam coating applications. All the other units which are necessary for the lamination lines can be provided.

Synthetic turf carpet back coating

For the synthetic turf carpets used in the fields such as sports grounds, roof coverings and interior & exterior coating. Suitable coating opportunity are provided.

Woven carpet (area rug) finishing lines: drum dryer system

It offers all solutions including all the units needed for finishing Axminster, Wilton and Viscose type carpets. These solutions are oriented at high capacity and efficiency. While the carpet back finishing is being dried in drying chambers, piles of the carpet is prepared for shearing by being steepened with drum drying.

Kiss-roll plastering from the tank

- Kiss-roll unit is the unit where finishing process is applied on the woven and synthetic turf carpet. With this kind of coating machine, latex and calcite mixtures can be thinly applied on the woven carpet and optimally on the synthetic turf carpet
- Its general construction structure consists of stainless sheets and profiles. It has one stainless chemical reservoir/tank. For cleaning this tank following the process, drainage process with pneumatic piston control can be performed
- For the kiss-roll process, one kiss-roll cylinder and two idle press rollers which can manually move downwards – upwards are used
